Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM  
THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Herbert et al (5,885,172). Regarding claims 1 and 2, Herbert discloses a golf ball comprising a solid center, an inner cover layer and an outer cover layer. The inner cover layer is equivalent to applicant's intermediate layer. The inner cover layer has a flex modulus from 65,000 to 120,000 psi (448-827 MPa). Since the materials are equivalent the elongation is considered an obvious feature. Regarding claim 3, the inner cover layer may be made from ionomers, thermoplastic polyurethanes, or thermoplastic polyesters (col. 6, lines 25-36). Regarding claim 4, the inner cover layer has a thickness from 0.020 to 0.045 in (0.5-1.143 mm) (fig 1). Regarding claim 7, the inner cover layer includes one material. Although Herbert does not disclose the elongation claimed by applicant the present invention is obvious to one of ordinary skill in the art over Herbert since the materials for the layers are equivalent.

Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Herbert et al (5,885,172) in view of Halko et al (6,458,046). Herbert does not disclose the inner cover/intermediate layer made from polycarbonate or polyacetal resins.

Art Unit: 3711

However, Halo teaches an intermediate layer made from various types of materials, including polycarbonate and polyacetal (col. 9). One of ordinary skill in the art would have varied the material type to obtain the desired ball properties.
